

EMIS – Energy Management Information Software

Enabling the Intelligent Use of Energy

Managing a facility's energy is becoming increasingly relevant to organizations in all sectors, as energy prices rise and companies are looking for more ways to improve their bottom line. Energent's state of the art software and industry expertise helps companies every day in:

- Industrial and Manufacturing
- Commercial Buildings
- Hospitals
- Government Buildings
- Large Retail Chains
- Resorts
- Universities
- School Boards
- Utilities

Energent's solution combines the model-based analytics of an Energy Management Information System with expert Energy Analyst services. We understand that managing energy is not an easy task and thus clients turn to us every day for the insight that enables them to make intelligent energy decisions.

We are also a preferred choice of progressive utilities as they deploy strong and successful conservation and demand management programs to their customers. As the smart grid infrastructure evolves and becomes a reality, Energent has the all-asset optimization software to provide for efficient energy use behind the meter.

The Energent Energy Suite:

Energent Energy Monitoring

Monitors your energy use in real time and displays this information on our cloud-based platform for easy access.

Energent Energy Targeting

By developing mathematical models the system identifies where in your facility you are consuming the most energy. This allows you to identify where the greatest opportunities for savings are.

Energent GHG

The system converts your energy use into reportable greenhouse gas emissions, in accordance with the generation mix of your jurisdiction. GHG equivalents can also be displayed and reported.

Energent Peak Demand Management

Charges for demand management come in many different forms. Energent can work with you to identify ways to reduce additional demand charges – ultimately lowering monthly electricity costs.
